Optimization Campaign for Irrigation Water Consumption in All AKC

Dear Residents,

Al Khor Community is currently trying to reduce water use, in line with ongoing budget optimization and environmental conservation.

Recently, all settings in irrigation controllers in the community were adjusted. This will avoid wasteful overwatering caused by improper settings.

Please participate in water conservation by not changing the settings in controllers inside your villas. Do not try to manually use the valve, and please do not use the yellow hose for watering.

This reduced watering will not affect or harm your garden, rest assured it will still receive enough water to be healthy and green. In many cases, it will even improve the condition of your plants, which were chosen as they are low water consumers.

By working together, each household in AKC can save water and protect Qatar's environment.

For any irrigation system malfunction and concerns please feel free to contact the landscaping section on landscaping@qatargas.com

Thank you for your usual cooperation and support.
